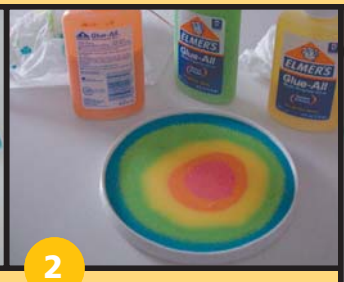
This is a fun craft to make with your kids at any age. This craft allows your kids to be creative and let their imaginations run wild. Just be careful, this can be a sticky project that should be made on an easy to clean surface.

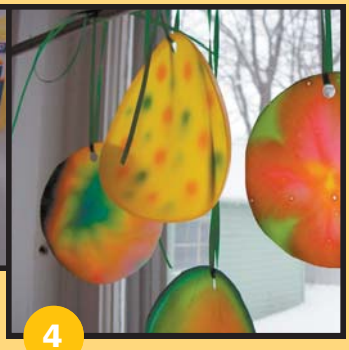
KID CRAFT CORNER

# glue sun catchers

**WHAT YOU WILL NEED:**

Glue
Food Coloring
Plastic Lids
String or Ribbon
Wax Paper





**DIRECTIONS:**

1. Pour out about 1/4 of the glue from each bottle of glue. Then, just add drops of food coloring to each bottle until you reach the desired color. Parents might want to add the food coloring, but shaking the bottles to mix the glue is fun for the kids.

2. Use the glue to create a design on the lid. *Notes: If you put multiple colors in at once they will bleed together. If you want a specific pattern, try layering. Make a design on the lid, such as polka dots, and let them dry completely. Then, cover the dried polka dots with another color that covers the lid.*

3. Once the glue has dried completely, the sun-catcher will pop right out of the lid. Depending on thickness the glue could take 24 hours or more to dry. Then, set your sun-catcher on a piece of wax paper overnight to get firm.

4. Finally, make a hole using a nail or even a hole punch and tie a string through the hole. Then, hang your sun-catcher in a window that gets plenty of sunshine!
